

BSC6 temporal coding: spike timing -> 6-bin discriminative vector

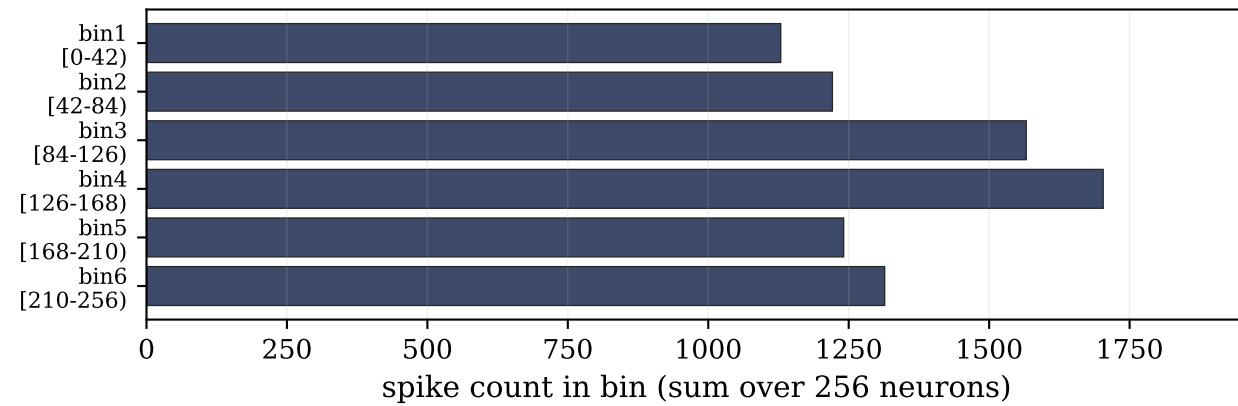

Class: Neg (subject 130)

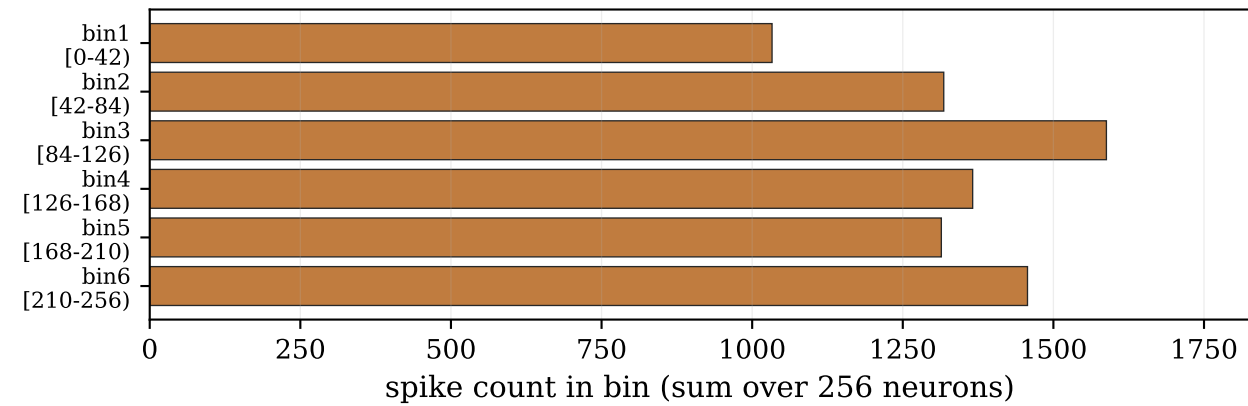

Class: Pos (subject 135)

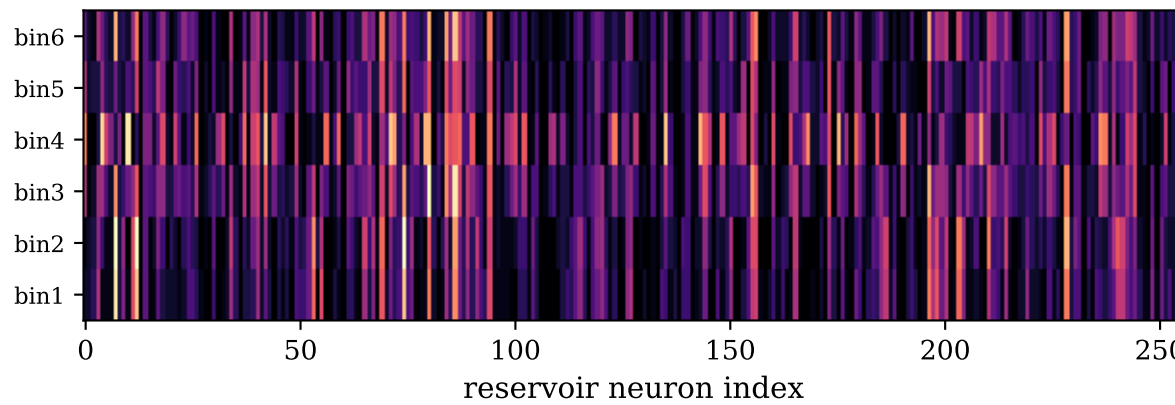

temporal-bin code (BSC6)

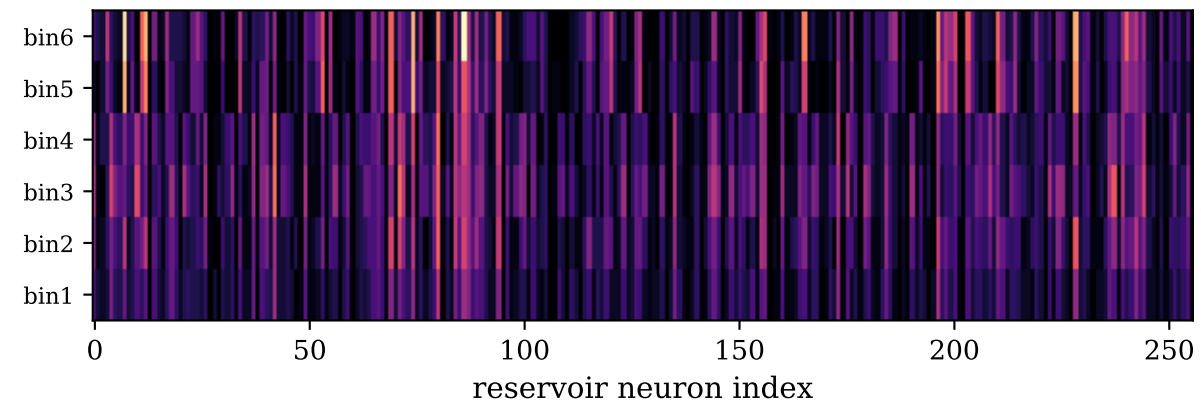

temporal-bin code (BSC6)

BSC6 feature vector (6 x 256 = 1536-d)

BSC6 feature vector (6 x 256 = 1536-d)

Rate code (total spike count): the two conditions look identical -- timing is what differs
